CLEAN**

Comac Easy-Clean Tanks

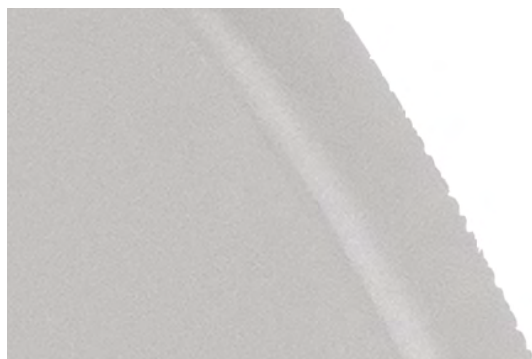

A real help against unpleasant odours

In recent years, scrubbing machines are increasingly used in daily operations, even in the presence of people. This change in the mode of operation has highlighted the need to develop new solutions with the purpose of reducing machines' impact on the environment and people.

Comac, which always strives to offer complete and effective cleaning solutions, has designed a special treatment that makes the tanks easy to clean. It is an additive used in the moulding of the tanks to significantly reduce the porosity of the plastic, thus making the inside of the structure more smooth and easy to clean.

The effectiveness of this treatment is measured with a lower sedimentation of dirt and, consequently, a reduction of bad odour that is usually generated inside the tanks.

In order to offer an even more comprehensive solution, Comac decided to implement the treatment on both tanks.

PLASTIC WITHOUT EASY-CLEAN TREATMENT

PLASTIC WITH EASY-CLEAN TREATMENT

BENEFITS

- Facilitates the cleaning, hygiene and sanitization of the tanks of floor scrubbers
- Helps to prevent the unpleasant odor that can form inside recovery tanks
- Reduces the sedimentation of dirt, and as a result, the presence of any pathogenic agents that may be found inside the tanks
- Helps to improve the perception of cleanliness by those who may find themselves in the vicinity of the floor scrubber
