CSF - Constant Solution Flow

Constant Solution Flow for the homogeneous and uniform distribution of the solution

Constant Solution Flow is the Comac technology that enables the correct distribution of the solution on both brushes of floor scrubbers with dual disc brush head.

By means of a distributor with differentiated flow sections, CSF ensures that the delivery of the solution is homogeneous and uniform across the entire working width, thus improving cleaning efficiency even at low flow rates.

BENEFITS

- Delivery of the solution is homogeneous and uniform across the entire working width
- Improved cleaning efficiency even with low flow rates
- Optimization of the use of the detergent solution
