Moving brush head

The Comac solution for effective cleaning, even along walls

Moving scrubbing brush head: on activating a simple control, the moving brush head comes out to the right to reach the dirt that is deposited up against walls. This solution enables the machine to scrub and not just sweep, as occurs with scrubbing machines equipped with side brushes.

The operator can therefore remain at a distance from the walls, reducing the risk of collisions that could damage the body of the floor scrubber and the wall itself.

BENEFITS

- Greater comfort for the operator
- Scrubbing also possible along walls
- Prevention of damage to the body of the floor scrubber
- Prevention of damage to walls and vertical objects
