Emergency stop

Safety within easy reach

Emergency stop is a control designed to be **easily identifiable**, clearly visible and above all **rapidly accessible**.

It is very easy to operate; on pressing the **button**, **the machine stops all the functions**. If the operator should find themselves in dangerous situations, activating this button halts all functions and **the machine stops**, automatically applying the safety brake.

Thanks to this control, Comac machines can work in complete safety even when the operator is not highly qualified.

BENEFITS

- Safety for the operator
- The function is always available in all operational modes
- Easy operation and immediate stop
