Blue led safety light

The safety light for avoiding distractions and workplace accidents

Workplace safety is a fundamental aspect to be taken into consideration in any work environment. Accidents often happen when workers are distracted because they're concentrating on the task in hand. That's why it's important to use suitable safety tools like **Blue Safety Spotlight technology**, which can help prevent accidents in the workplace and at the same time improve cleaning jobs.

Thanks to its blue LED, the Blue Safety Spotlight produces a high-intensity light beam that warns of an approaching scrubbing machine or any other cleaning machine.

In very noisy places, any acoustic device may be drowned out by other sounds. That's why Comac has chosen a blue light that's discreet but always visible, even on bends. A person walking in a logistics centre, for example, will notice the light before the machine itself arrives, so the situation becomes one of extreme safety without any inconvenience.

The lamps installed on this device are of the LED type, offering notable energy savings and reducing maintenance and replacement costs compared with traditional incandescent lamps.

BENEFITS

- **Prior warning:** the blue light beam projected on the ground arrives before the machine, guaranteeing total safety to avoid any possible hazardous situations
- **All-round safety:** this device can be used with both forward and reverse movements
- **LED technology:** high glare-free lighting power with low energy consumption
- **Long lifespan:** the low operating temperature of LED lamps guarantees a longer lifespan for the device
- **Visual warning:** enhanced safety in the driving areas and places with poor visibility, thanks to the light beam
- **Safety without inconvenience:** no more acoustic warnings that disturb both drivers and pedestrians; just a visual warning for silent protection
