Electric filter shaker

The Comac system that makes cleaning the filter effective even when there is a large amount of dust present

Comac offers the option of equipping its products with an **electric filter shaker**.

Enabling a **simple control** is all it takes to activate a special motor that vibrates at high intensity and removes even the most stubborn dirt from the walls of the filter. The operator can thus **work better** and **for longer** without having to worry about removing the filter to clean it. Furthermore, the operator does not have to manually clean the filter, which can sometimes be difficult and tiring.

This function is available in different configurations on vacuum cleaners and sweepers.

BENEFITS

- User-friendly
- Less effort for the operator
- Greater productivity
- Reduced extraordinary maintenance
